Mack,

I wanted to do a follow-up on our conversation from the other day. Enclosed is a photo of the firearm that I told you about. This Firearm is used by the Sheriff's training Division for Demonstrations, Ammo Evaluations, and Officer Qualifications. As I told you on the phone about two weeks ago this firearm reached the 1 million round count. Normally this would not be a big deal for us as we have many firearms that have exceeded that number of rounds. The amazing fact that we have not had to do any repairs to this firearm to reach this milestone is the reason that I am writing to you.

We installed your buffer system and a "D" ring into this firearm about a year ago. This firearm had already been in service for at least five years with an unknown number of rounds through it. We have done nothing more than routine cleaning and lubing to this firearm during this time period.

As a demo gun this firearm routinely is fired full auto for multiple magazines with no cool down returned to the locker only to be used again without cleaning or lubrication. Normally for an AR style rifle to achieve this round count for us it would have to be rebuilt at least once or twice.

I attribute this lack of rebuilding of this firearm directly to the buffer and "D" ring that we bought from you. As I told you we were so happy with the results of our evaluation we purchased these items for all our SWAT team members M4 machineguns. The ability to control the firearms in full auto sold the team members on the Buffer's. The added reliability was just an extra benefit that they liked after the fact.

Again I just wanted to say thanks for getting me to try your product. Keep up the good work.
